Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- IA. Drawn to a method (for controlling a continuously variable ratio transmission) (claims 1-16, and 43)
 - IB. Drawn to a method (for controlling a continuously variable ratio transmission and adjusting the control signal to the variator and or adjusting a torque controller of the engine) (claims 17-28)
 - IC. Drawn to a method (for controlling engine speed error) (claims 29-37, and 39)
 - ID. Drawn to the method (for controlling engine speed by establishing based requirements for engine and transmission settings). (claim 38).
 - II. Drawn to an apparatus (adapted to implement the method of claim 29)
2. The inventions listed as groups I(A-D) and (II) do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The groups

listed above are not within the permitted combination of different categories of inventions.

3. Upon election of IA, the applicant is further required to elect **one species from each group of the disclosed species**. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The groups of species are as follows:

Group A

A1. Wherein the construction and arrangement of the variator is such that the torques exerted by the variator upon its input and output members are proportional to magnitude of the primary control signal (claim 5)

A2. Wherein the construction and arrangement of the variator is such that the sum of the torques exerted by the variator upon its input and output members is always proportional to magnitude of the primary control signal (claim 6)

4. Applicant is required, in reply to this action, to elect a single disclosed species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

5. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: As set forth in the form PCT/ISA/210, there is no special technical feature that defines a contribution over the prior art (see US 2002/0055817A1).

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chuong Nguyen whose telephone number is 571-272-3445. The examiner can normally be reached on 8:00 - 5:00 PM EST.
